

Validation of ecosystem modelling as a tool for ecological effect assessments

Frederik De Laender, Karel De Schamphelaere,
Peter Vanrolleghem and Colin Janssen

Ecological Effects Assessment (EEA)

✓ Ecological Effects Assessment: what is the effect on the ecosystem of a given chemical concentration?

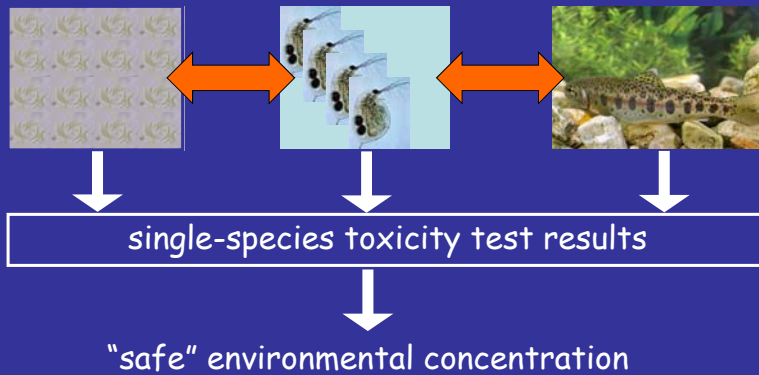

→ derivation of water quality criteria

SETAC Europe, Annual meeting, 21/5/2007, Porto, Portugal - frederik.delaender@ugent.be

EEA: current solutions

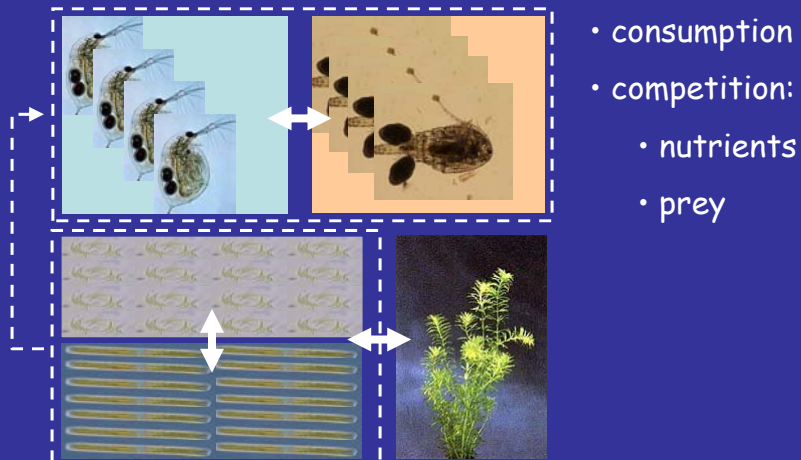

- ✓ extrapolation of single species toxicity test results
- ✓ ..which are only function of inherent species sensitivities

SETAC Europe, Annual meeting, 21/5/2007, Porto, Portugal - frederik.delaender@ugent.be

EEA: alternative solution

- ✓ ecosystem modelling

SETAC Europe, Annual meeting, 21/5/2007, Porto, Portugal - frederik.delaender@ugent.be

EEA: alternative solution

✓ dynamic ecosystem modelling *in ecotoxicology*

$$\frac{dBio_{\text{phyto}}}{dt} = \text{photosynthesis} - \text{sinking} - \text{consumption by zooplankton} - \text{other losses (e.g., respiration)}$$

f (toxicant) points to photosynthesis

$$\frac{dBio_{\text{zoo}}}{dt} = \text{consumption} - \text{mortality} - \text{other losses (e.g., excretion)}$$

f (toxicant) points to consumption

SETAC Europe, Annual meeting, 21/5/2007, Porto, Portugal - frederik.delaender@ugent.be

Research goal

How accurate are model predictions?

→ comparison with experimentally observed effects

SETAC Europe, Annual meeting, 21/5/2007, Porto, Portugal - frederik.delaender@ugent.be

Case study: copper in microcosms

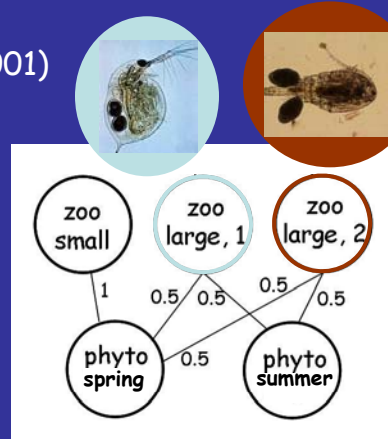

1. Study report by Schaeffers (2001)

2. Species grouping:

- ✓ growth kinetics / body size
- ✓ sensitivity for copper
- ✓ cladocerans and copepods
- ✓ macrophyte

3. Single-species toxicity data:

- ✓ mortality - EC_{50} s
- ✓ growth - EC_{50} s

SETAC Europe, Annual meeting, 21/5/2007, Porto, Portugal - frederik.delaender@ugent.be

Case study: copper in microcosms

dynamics: control vs. treatment

Quantification of effects:

- average biomass in time
- for each population
- at different chemical concentrations
- relative difference (RD)

$$RD_c = \frac{\overline{bio}_c - \overline{bio}_{control}}{\overline{bio}_{control}}$$

- assumption: $|RD| > 0.2$ is observable
- used for NOEC derivation

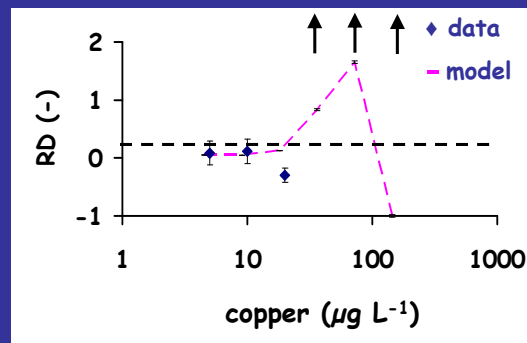

Data vs predictions: cladocerans

- ✓ good predictions of RD-values
- ✓ trend: decrease of biomass with increasing Cu
- ✓ observed = predicted population-NOEC = 20 $\mu\text{g L}^{-1}$

SETAC Europe, Annual meeting, 21/5/2007, Porto, Portugal - frederik.delaender@ugent.be

Data vs predictions: spring phyto

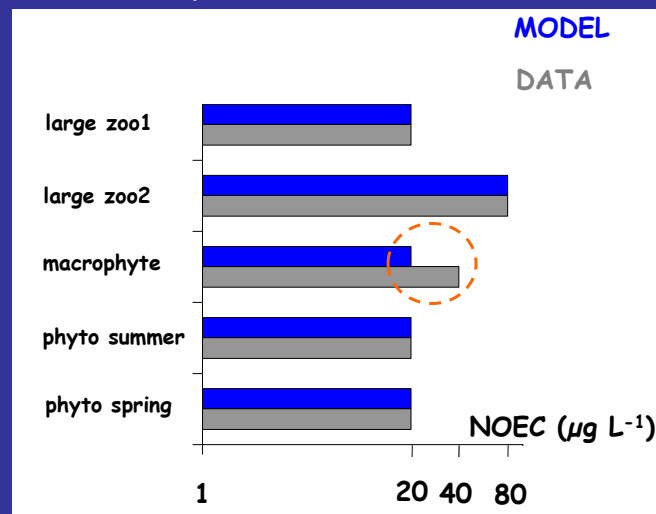

- ✓ inaccurate RD-predictions at higher concentrations
- ✓ trend: increase of biomass with increasing Cu
- ✓ observed = predicted population-NOEC for increase = 20 $\mu\text{g L}^{-1}$

Data vs predictions: macrophyte

- ✓ effect slightly over-predicted by model
- ✓ observed population-NOEC = 40 $\mu\text{g L}^{-1}$
- ✓ predicted population-NOEC = 20 $\mu\text{g L}^{-1}$

Data vs predictions: NOECs

- ✓ ecosystem-NOEC = min (population-NOECs) = 20 $\mu\text{g L}^{-1}$

SETAC Europe, Annual meeting, 21/5/2007, Porto, Portugal - frederik.delaender@ugent.be

Data vs predictions: other chemicals

- ✓ 11 additional large-scale studies

- ✓ diflubenzuron
- ✓ atrazine (3)
- ✓ linorun
- ✓ esfenvalerate (2)
- ✓ metribuzin
- ✓ azinphos-methyl (2)
- ✓ fenthion

- ✓ with a duration of ≥ 40 days

SETAC Europe, Annual meeting, 21/5/2007, Porto, Portugal - frederik.delaender@ugent.be

Data vs predictions: other chemicals

- ✓ e.g. study by Denoyelles et al. (1982), Ecology, 63, 1285-1293

- ✓ atrazine

- ✓ all NOECs accurate

SETAC Europe, Annual meeting, 21/5/2007, Porto, Portugal - frederik.delaender@ugent.be

Data vs predictions: other chemicals

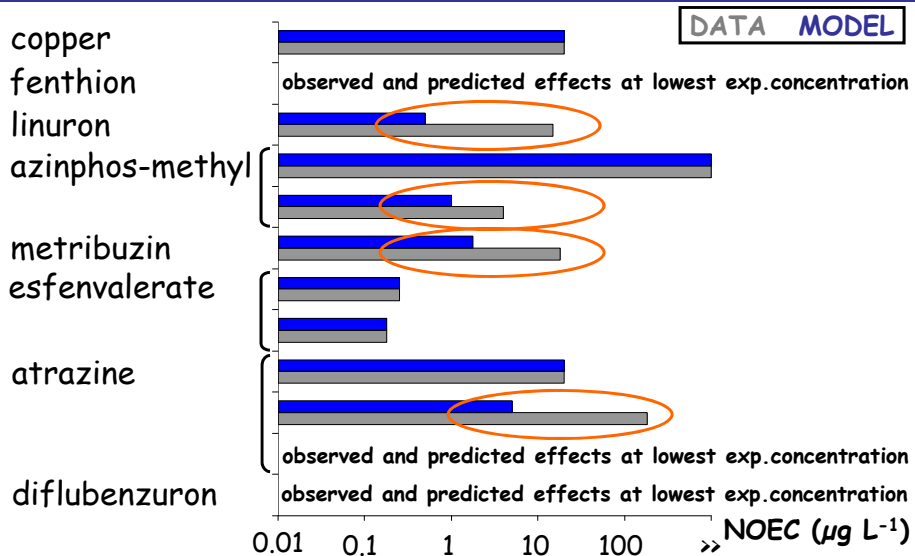

- ✓ e.g. study by Brock et al. (2004) Environ. Poll., 130, 403-426
- ✓ metribuzin

- ✓ predicted ecosystem-NOEC a factor 10 conservative

SETAC Europe, Annual meeting, 21/5/2007, Porto, Portugal - frederik.delaender@ugent.be

ecosystem-NOECs: overview

SETAC Europe, Annual meeting, 21/5/2007, Porto, Portugal - frederik.delaender@ugent.be

Conclusions

- ✓ Methodology relies on :
 - ✓ single-species toxicity test results
 - ✓ default feeding relationships
- ✓ Accurate predictions of copper effects in microcosms
- ✓ Inaccurate NOEC predictions tend to be more conservative
 - ...especially at ecosystem-level

SETAC North America, Annual meeting. 11/7, Montreal, Canada - frederik.delaender@ugent.be
